

Impact of Customer Preferences on Airbnb revenue

By Hanumant Garad

Agenda

- Objective
- Background
- Key findings
- Recommendations
- Appendix:
 - Data Sources
 - Data Methodology
 - Data Model Assumptions

Objective

- Improve our shared understanding on insights gathered in the analysis
- Improve data cleaning and data preprocessing techniques to get better insights
- Share detail analysis to our Lead Data Manager and Lead Data Analyst

Background

- Airbnb has seen a major decline in revenue for the past few months due to pandemic
- Restrictions have started lifting
- People started to travel

Listing distribution

- Manhattan gets maximum listings ~44% followed by Brooklyn and Staten Island observing very less listing
- There are almost ~52% listing of Entire home/apt room type and only ~2% listings are available for shared room
- Only Manhattan has ~61% listings of Entire room/apt and rest neighborhoods observe highest percentage listing in private room
- listing of shared room in all geographies lies between 2-5 % only

Listing by Neighbourhood

Listing by Room Type

Listing by Neighbourhood per Room Type

Price Analysis

After excluding outliers in price feature following results are obtained:

- Low Price listing shares ~25% across all neighborhoods receives very low reviews per month on the other hand listings offers average price shares > 50% across all neighborhood receives decent number of reviews
- Manhattan is the only neighborhood offers high price ranges per night across all room types
- Entire home/apt charges highest price ranges across all neighborhoods

Customer preference analysis

- Shared and private rooms are the most popular room types showing median > **0.4** reviews per month per listing
- Customer prefers Staten Island and Bronx neighborhoods over other geographies in NYC
- Staten Island and Bronx neighborhoods are mostly popular in Entire home/apt and Private room section

Reviews per Room Type

Reviews per Neighbourhood

Customer preference analysis

Customer is preferring listings that have minimum night stay across all room types.

Minimum Night Stay vs Reviews per Neighborhood

Recommendations

- Suggest hosts keeping night stay minimum for their listings or provide some discount on listing price for maximum night stay
- Promote hosts for increasing number of listings in Staten Island and Bronx neighborhood since they are popular compared to another neighborhood
- Listing price per night can be reduced in Manhattan neighborhood to get good customer review

Appendix

- Data sources
 - 2019 Airbnb listing data set from New York city
- Data dictionary
 - listing locations and its room type
 - Listing price, and its reviews
- Data Methodology
 - Data cleaned by dropping unnecessary features and imputing null values
 - Box-whisker plots used to detect outliers
 - New feature created such as price per night for price analysis across room type and neighborhood
 - Python used for data pre-processing and univariate and bivariate analysis
 - Tableau used for data visualization
- Data Assumptions
 - The reviews per listing assumed to be positive reviews to define listing popularity
 - The listing price is the total price for all minimum nights

Thank you
